

**Amendments to the Drawings:**

The attached sheet(s) of drawings includes changes to Figs. 2 and 3. These sheets, which includes Figs. 2 and 3, replaces the original sheet(s) including Figs. 2 and 3.

Attachment: Annotated Sheet Showing Changes

### Remarks

Applicant respectfully requests reconsideration of the above amended claims of the application in view of the following remarks.

Applicant notes with appreciation the Examiner's indication on page 13 of the Office Action that claim 2 is objected to as being dependent upon a rejected base claim, but that it would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Applicant has amended claim 1 to include all of the limitations of claim 2, thereby placing it in independent form. Applicant also submits new claim 13 that is directed to the embodiment disclosed in paragraph 25 wherein a single transmitter having multiple channel capabilities is provided. Claim 13 combines the limitations of former claim 1 and many of the limitations of former claim 2, but is directed to the single transmitter with multiple channel capability embodiment.

Applicant has cancelled claim 2 because all the limitations have been incorporated in claim 1. Applicant has cancelled claims 9 through 12 that are directed to the method of providing a communication system to place this case in condition for allowance.

In response to the Examiner's objection to the drawing under 37 C.F.R. § 1.83(a), the specification has been amended and corrected drawing sheets are submitted in compliance with 37 C.F.R. § 1.121(d). The specification has been amended to indicate structural details that are not shown in the drawings to clarify the disclosure. In addition, certain details in the specification that are not shown in the drawings have been deleted from the specification. In particular, in regard to Figure 1, elements such as the rotating lights, double pole switches, single throw switches, push button switches and others are indicated as not being shown in the drawings to clarify the disclosure.

In regard to Figure 2, reference numerals referring to elements shown in Figure 1 that are not shown in Figure 2 are now indicated as being shown in Figure 2 to clarify the disclosure. In addition, the description of a plurality of single channel transmitters is now denoted by phantom lines dividing the transmitter 38 into a plurality of single channel transmitters 38', 38'', and 38'''. In addition, an indication is made that the solar power supply is not shown in Figure 2.

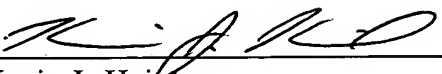

In regard to Figure 3, reference numeral 54 has been added to illustrate the pipe 54 to which the pipe bracket 52 is attached. Also in regard to Figure 3, it is indicated that the figure does not illustrate a flashing display element or solar power source by adding the indication to the description that those elements are not shown in the drawings.

Applicant respectfully requests the Examiner to telephone Applicant's attorney if it would advance the prosecution of this case. In particular, if any of the changes are not accepted by the Examiner, Applicant would appreciate notification so that the required corrective action may be taken.

Claims 3-8 remain in the application and are submitted to be patentable in that they now depend from amended claim 1 that includes all the limitations of claims 1 and 2 that was indicated to be allowable by the Examiner in the Office Action. Applicant has attempted to place this case in condition for allowance. No additional fee is believed to be required for this amendment and in particular for the addition of claim 13 since only two independent claims remain in the case and the total number of claims is less than 20. The Examiner is respectfully requested to pass this case to issue.

Respectfully submitted,

**ROBERT H. WILSON**
